Mala

Having undergone a £185 million refurbishment project, Royal Ascot reopened in 2006. Diffusion successfully fitted 330 Highline 235i Waterside units with electric heat, which were located into the ceiling voids in the newly built private viewing boxes at the western end of the complex, and into the restaurant area. For one of the most extensive re developments of its kind in Europe, Diffusion were able to resolve the challenge of how to supply adequate heating & cooling conditions in a restricted area with a bespoke solution.

- Slim design
- Low noise levels
- Easy to commission and install
- Multi spigot outlet
