

# 100 Cheapside

Case Study

- **LOCATION:** London
- **PRODUCT:** Eclipse 3000 LPHW
- **QUANTITY:** 2
- **CONSULTANT:** Hilson Moran
- **CONTRACTOR:** Skanska

100 Cheapside is an architecturally striking new headquarters building in a prime City location, between the Bank of England and St Paul's Cathedral providing 86,616 sq ft of Grade A office space over nine upper storeys with a stunning roof terrace on the top floor.

100 Cheapside comprises the comprehensive redevelopment of a prominent site at the corner of King Street and Cheapside on the ceremonial route to and from the Guildhall. The existing buildings were demolished, with the new BREEAM 'Excellent' building taking its place.

Diffusion supplied two Eclipse 3000 LPHW for the main reception area to this recently refurbished office block on Cheapside in London. The units were supplied with special plaster in stainless steel that also allowed access to the unit via the return grilles. Our high capacity 3 row coil version was supplied to achieve satisfactory heating duties for the flow and return temperatures of 55/35°C.
